Overview

Minimum Spanning Trees

A minimum spanning tree connects all the vertices in a graph together into a tree with the lightest weight possible.

Approach

Algorithms:

- ▶ Kruskal's
- ▶ Prim's

Implementations:

- ▶ Adjacency List
- ▶ Adjacency Matrix

Problem Statement

How do Prim's and Kruskal's algorithms handle graphs of different densities?

Do they depend on whether the graph is implemented as an adjacency list or an adjacency matrix?

Prim's Algorithm

Main Idea

Basic idea of the algorithm.

Pseudocode

extremely neat and clear fits in one slide pseudocode.

Implementation Details

Analysis of Prim's

interesting features, time complexity, why?

Kruskal's Algorithm

Main Idea

- ▶ Separate vertices into disjoint sets
- ▶ Reorder all edges by smallest weight first.
- ▶ Loop through edges, add it to MST if its vertices are disjoint.

Pseudocode

```
EdgeContainer all_edges = graph.sorted_edges()
```

```
VectorSet set = disjoint_set(v.size)
```

```
EdgeContainer MST = empty
```

```
for (Edge e : all_edges)
```

```
    v1 = e.source;
```

```
    v2 = e.destination
```

```
    if (set.are_vectors_disjoint(v1,v2))
```

```
        mst += e;
```

```
        set.join(v1,v2)
```

Key Data Structures

- ▶ A vector of all the sorted edges
- ▶ A vector for holding edges included to minimum spanning tree
- ▶ A vector representing disjoint sets

Discuss key data structures, classes, and functions used in the implementation.

Functions

- ▶ ReadFromAdjacencyList or ReadFromAdjacencyMatrix
- ▶ SortEdgesSmallestFirst, size $|E| \log ||E||$
- ▶ CreateDisjointSets, size $|V|$
- ▶ JoinSets, size $|V|$
- ▶ AreSetsDisjoint, size $O(1)$

Analysis of Kruskal's

- ▶ Only uses graph representation for retrieving edges
- ▶ Sorting the edges is of size $|E| \log |E|$
- ▶ Meanwhile, looping through edges is of size $|E|$
- ▶ The time complexity is carried by the sort, $|E| \log |E|$
- ▶ Kruskal's works well with sparse graphs

Results

Demonstration

Our Data

Describe the dataset that you used to test the algorithm. How did you generate it? What characteristics does it have, and why? What did you decide to vary in the input set, and why?

Results

What did you learn from testing your algorithm?

Limitations and Future Work

What limitations does your project currently exhibit? If you had another month, what could you improve? What additional tests would you run?

Summary

Recap

This is a recap of what we have talked about.

Questions

Thank you.
Any questions?
